

# Usage example in Coal thermal power plant

## Boiler Tube

**Carbon, L/A  
H/A(T91、T92)**

\*H/A : High Alloy, L/A : Low Alloy

## Pipe

**Carbon, L/A  
H/A(P91)**

## ◆ Trend

**Higher efficiency in coal-fired thermal power**

- Supercritical pressure
- Ultra-Supercritical pressure

**High Alloy tubes, the grade is T91 and T92, are enable to use at high temperatures and pressure for long periods of time.**
